Chapter 4

GUI over CLI

1). If we have to see what is in the file we can simply click on the file and see what inside by GUI but in CLI we have to type command the we can see

- In CLI if we don't know the folder or random word can't find it but in GUI there are symbols of some folder like bin which is like like trash which look like dustbin

- GUI is looks good more easy to use so it does not frustate user but CLI is not user freindly

CLI over GUI

→ If I have to creat 100 files I can creat it in seconds from CLI

→ If I have to see number of files more the x mb I can see it from one command

→ In seeing logs

2. touch file.txt
cat > file.txt <'EOF'
#!/usr/bin/env python3
a=int(input())
b=int(input())
print(a+b)
EOF
chmod +x file.txt
python3 file.txt

3.) 1. short options: use a single hyphen
ls -l

2. long options: use double hyphens
ls --all
combine option
3 ls -la

GNU vs BSD style
GNU style - commonly supports long options
BSD style → use short options

4. GUI make computers easier to use through windows, icons, menus and a mouse instead of typing only commands
• Xerox PARC: Developed the Xerox Alto in the 1970's, introducing important GUI concepts like windows, icons and mouse-based interaction
