Chapter 1

What are computers

(1) Today 3D printers are use in making houses
Today 3D printers used in making toys for kids
- used for making the body of drones
- used for making kitchen & Dining accessorise like spoon, bottle openers
- 3D printers used in making idols
- used for repairing the broken thing
- used for making tech accessories
- used for making keychains, plant pots
- used for making door stoppers
- Used for making modular battery cases

(2) machines that can be programmed basic called computers as we can give instruction or we can say that we can change its programs by adding another program with different instruction to it to change its functionality, behaviours.
machines that cannot be programed can never be changed by or we cannot add any other type of program to it or we can not change its behaviours like electeric juicer which perform a task to produce juice of fruits but can't be programed or ~~cant~~ by other instructions.

(3) Since childhood, my dream has been to become a computer engineer. I always interested in computers and technology and wanted to know how they work

(a) Today, computers are used in almost every field. computer engineers develop software, apps, websites, AI tools and technologies that make our life easier

(b) Through my B.Tech journey, I will learning programming, problem solving, AI and other technical skills. I want to use this knowledge to build useful applications and solve real world problems

(c) After exploring this, my childhood dream feels closer than before. I would definitely like to pursue it with more dedication & become a skilled computer engineer
