Chapter 7

How Software works

① Advantages of compiled languages

1. Faster execution: As program compiled into machine code before execution
2. Suitable for large & performance intensive Application
3. Errors are detected during compilation
4. No compiler need at runtime

examples — C, C++

Advantages of Interpreted Languages

1. Easy to debug
2. Platform independent
3. Easy to develop
4. No seperate compilation step

~~After~~ Interpreted — python, Javascript

② Translation always happens because the computer needs instructions it can execute. A compiler translates before running, whereas an interpreter translates during running
